

ATS-3200 Radio Test Set (RTS)

Next-gen capability for legacy and modern radio test

Maximum Return on Investment

Extend the life of your legacy radios while simultaneously supporting modern radio technology, both airborne and ground, with the ATS-3200 Radio Test Set (RTS) - the complete solution for military and commercial radio test.

The ATS-3200 RTS is a PXIe-based, benchtop, software-defined platform, handling the work of multiple instruments to verify the functionality of

Ideal usage:

- GRM-122 plug and play replacement
- Legacy and modern radios
- Airborne and ground
- Multiple OEMs
- Military and commercial radio test

both legacy radios (e.g. SINCGARS) and modern wideband radios (e.g. AN/PRC-160, AN/PRC-163) from virtually any Original Equipment Manufacturer (OEM).

Developed with the user in mind, the ATS-3200 RTS and the portable, ATS-6100 RTS share a common software framework and test executive. This synergy from depot to field allows the user to focus on the task at hand and increase overall operational efficiency.

Designed for Maintainability and Expandability

The ATS-3200 RTS is built with modular system architecture which features design for maintainability and the capability for future expansion.

Due to its unique design, it boasts exceptional Mean Time to Repair (MTTR) with easy, in-and-out access to the Line-Replaceable Units (LRUs) and rapid, automated calibration.

KEY BENEFITS

- **Complete solution** - test legacy and modern radios, both airborne and ground, from multiple OEMs
- **Maximum return on investment** - extend the life of your legacy radios with headroom to test modern radios
- **GRM-122 replacement** - plug and play support for GRM-122 TPSs and cable sets
- **Synergy from depot to field** - common test executive and software framework
- **Reduced downtime** - minimum MTTR and rapid automated calibration
- **Flexibility to customize** - expandable PXIe-based platform
- **Long-term partner** - over 60 years of expertise in test and integration solutions

Downselected as the tester of choice by the U.S. Army.

In addition, the design of this platform provides room for future expansion, both in hardware and software, so you have headroom for growth as technologies evolve and your needs change.

Keep Equipment Deployed.

Plagued by costly No-Fault-Found (NFF) returns taking your valuable assets out of service for months? The ATS-3200 RTS has built-in capability to perform a wide range of tests to identify failure root cause, allowing you the capability to repair in-house without buying additional equipment or simply “doing without”.

Features Customized for You.

The ATS-3200 RTS has a single, low-cost PXIe module which contains the entire Radio Frequency (RF), Analog, and Digital Sub-systems performing complex measurement and stimulus signal processing functions. Additional features include:

- Easy access to the LRUs for repair
- Frequency range from 1 MHz to 6 GHz
- Wide modulation bandwidth up to 200 MHz
- Intuitive Graphical User Interface (GUI) and Test Executive
- Low-cost, automated calibration and verification
- Reconfigurable and expandable
- PXIe-based platform
- Optional integrated Unit Under Test (UUT) power supply and 1553 bus control for airborne radios

The ATS-3200 RTS contains LRUs with room for expansion providing a complete solution for radio test in any industry.

Your Long-Term Partner.

With more than 60 years of expertise in the test field and a proven track record of providing leading-edge Radio Test Solutions, Astronics Test Systems knows what it takes to support a product for decades. Radio tester design and Test Program Set (TPS) development are core competencies of Astronics Test Systems which solidify its commitment to custom, integrated solutions for years to come.

From the Test Systems Experts.

Astronics Test Systems has provided military, aerospace, urgent communications, mass transit, space, and a host of other industry customers with test instruments since 1961. The ATS-3200 RTS brings all of our test system development wisdom to you in one, integrated solution.
