

See Clearly and Fly Safely

Enhanced Vision Systems for Your Rotorcraft

Fog, smoke, sand, darkness. When degraded environments call for upgrading your visibility, depend on the innovation of Astronics Max-Viz. Our customizable Enhanced Vision Systems (EVS) enhance the safety, performance, and cost-effectiveness of your rotorcraft with systems that deliver unmatched dependability and quality.

As your award-winning supplier of innovative EVS solutions, we work together with you to ensure your program's unique requirements are met, whatever your mission. Astronics Max-Viz has delivered more than 2,500 systems over the years, which are proving themselves every day on even the most rugged of missions.

Dual Sensor EVS

Astronics Max-Viz dual sensor EVS solutions deliver a high resolution, light weight, multi-spectral image that displays LED lights on the blended black and white LWIR image, using solid-state, low power, uncooled technology with zoom capability.

Single Sensor EVS

Astronics Max-Viz single sensor EVS solutions deliver light weight, solid-state, low power, uncooled thermal cameras with zoom capability, at an affordable price.
