

## Flight Deck Power System

### EMPOWER® Family of Aviation Qualified Power Products for the Flight Deck, Crew Rest, and Galley Applications

Astronics brings its expertise in aircraft power systems to the flight deck.

Whether you need to update an existing fleet or fill out a new build, the EMPOWER outlets are available for both linefitting and retrofitting your aircraft. Pilots are increasingly using electronic flight bags (EFBs) and the number of real-time applications they are using on those devices is rising. Increased usage can drain power, and airlines are requiring easily accessible power in the cockpit.

Astronics flight deck power systems are modular in design and available in 110VAC, high-power USB (10W), and the latest USB power delivery technology—USB Type-C (60W).

Keep critical electronics like EFBs charged and operating with the industry-leading technology of EMPOWER.

#### Linefit Flight Deck Power

Multiple EMPOWER products are already a standard linefit option on Boeing and Airbus.
